MANUAL DOOR LIFTS

Collapsible Door

Imperforated Door

Swing Door

Telescopic Door

Collapsible Doors are basic offering for a lift with manual doors. These doors are robust and since long have proved to be a simple yet effective solution for elevator doors hence, due to its reliability it is used for both Passenger as well as goods elevators.

Imperforate Doors are made like the manual collapsible doors but have flaps attached to it. These flaps make sure that when the door is closed no opening is left in the doors. Cut outs are made in the door for the purpose of having a look on the other side of the door.

Swing Doors is optional offering for a lift with manual doors. These doors can only be used on the Landings. These doors help totally enclose the shaft. The swing doors have a vision panel having glass and steel mesh. A door closure is fitted to the swing door to make sure the closing is done perfectly.

Manual Telescopic Doors are made to slide in a telescopic fashion. These doors add aesthetic value to the Elevators. Cut outs are made in the door for the purpose of having a look on the other side of the door, these cut out are covered with glass and steel mesh.

SS CABINS

Our Stainless Steel Elevator Cabin combines functionality and elegance in one outstanding product. Its durable stainless steel material is resistant to wear and tear, providing longevity and low maintenance for years to come. The cabin's elegant design offers an exceptional aesthetic appeal that perfectly complements modern and traditional building designs.

With authorized safety features and accessibility, this cabin ensures a smooth and efficient ride, providing everyone with an excellent elevator experience. Choose the Stainless Steel Elevator Cabin and give your building a classic and sophisticated look.

MS CABINS

MS cabins (Mild Steel cabins) in elevator lifts are a popular choice due to their durability, strength, and cost-effectiveness. These cabins are typically constructed from mild steel sheets and can be customized in terms of design, finish, and accessories to suit various architectural styles and functional requirements.

INDOOR & BUNGLOW LIFTS

Our superior, more environmental elevators are known for their style and reliability.

Our products aim to solve specific pain points for architects, builders and homeowners alike.

Specially designed for Bungalows & Hotels cabins by Elevanta Elevator

GOODS LIFT

Comprehensive Range of Goods Lift -

All cost-effective and simple and safe to use, they are supplied in self-supporting steel structures. This means that they don't require purpose-built shafts, making them easy to install in just days, with the minimum of builder's work.

Platform Goods Lifts

The Eleventa is a perfect example of a modern scissor lift. It helps you to navigate loads up to 2000kg, safely, quickly and easily, between small changes in floor levels—no more risky back-breaking lifting, lugging and shunting.

Goods Lifts for Heavy Loads

Making light work of moving heavy loads between two or more floors, goods only lifts come in a range of capacities up to 2000kg, with made-to-order models up to 3000kg available.

LOP & COP

Our elevator car operating panel and elevator landing operation panel are divided into variety of models. All models of elevator COP and elevator LOP support signal input through seven segment code, BCD code, and serial communication methods. With the elevator COP and elevator LOP, the elevator status, such as Overload, Fire Control, Full Load, Stop, and In Inspection, can be displayed in the car and the hall. The elevator landing operation panel is compatible with both simplex and duplex connection methods.

MACHINES

The Machine Room-Less (MRL) passenger lift is a cutting-edge vertical transportation solution designed for modern buildings.

Geared Machine

Geared traction elevators contain a single gearbox which is attached to the AC or DC motor.

Gearless Machine

The gearless machine will have its wheel attached directly onto the electric motor to instantaneously rotate the drive sheave.

Hydraulic

Elevator which is operated by fluid pressure generated by a suitable fluid.

CONTROL PANEL/V3f DRIVE

The V3F drive in elevators controls motor speed by adjusting voltage and frequency, ensuring smooth, energy-efficient, and comfortable rides. It minimizes wear and tear while enhancing passenger comfort with reduced noise and vibrations.
